CONTENTS

W. E. Boyce (*see B. E. Goodwin*)
R. K. Brayton and J. K. Moser: A theory of nonlinear networks 1
R. K. Brayton and J. K. Moser: A theory of nonlinear networks, II 81
D. R. Chenoweth: Characterization and calculation of steady, compressible, diabatic flow fields 177
Chong-Wei Chu: On the motion of a magnetically confined plasma cylinder . . 35
H. H. Denman and Y. King Liu: Application of ultraspherical polynomials to non-linear oscillations II. Free oscillations 273
A. Fialkow: The matrix of a transformerless network 57
B. E. Goodwin and W. E. Boyce: The vibrations of a random elastic string: The method of integral vibrations 261
M. E. Gurtin: Variational principles for linear initial-value problems 252
M. E. Gurtin (*see I. Herrera*)
S. L. Hakimi and S. S. Yau: Distance matrix of a graph and its realizability . . . 305
I. Herrera and M. E. Gurtin: A correspondence principle for viscoelastic wave propagation 360
P. G. Hodge, Jr.: Plastic plate theory 74
I. Hosokawa: Unified formalism of the linearized compressible flow fields 133
M. W. Johnson and R. W. Little: The semi-infinite elastic strip 335
H. B. Keller: Saint-Venant's procedure and Saint-Venant's principle 293
R. D. Kodis (*see W. Streifer*)
E. H. Lee (*see T. G. Rogers*)
R. W. Little (*see M. W. Johnson*)
Y. King Liu (*see H. H. Denman*)
R. D. Low: On a doubly mixed boundary value problem for an elastic layer . . . 153
R. M. McElvery and J. E. Smerczynski: The gain of a defocused circular aperture 319
K. S. Miller: Distributions involving norms of correlated Gaussian vectors . . . 235
N. Morgenstern: Irreversible thermodynamics of perfect plasticity 364
J. A. Morrison: On the damping of a satellite motion 148
D. S. Moseley: Non-separable solutions of the Helmholtz wave equation 354
J. K. Moser (*see R. K. Brayton*)
J. K. Moser (*see R. K. Brayton-II*)
M. P. Murgai and R. K. Varma: Radiative transfer effects in natural convection above fires-opaque approximation 345
C. M. Price: Optimum impulses for gravity-free rocket motion 327
C. R. Putnam: Wave operators and absolutely continuous spectra 256
T. G. Rogers and E. H. Lee: The cylinder problem in viscoelastic stress analysis 117
R. M. Rosenberg: On the existence of normal mode vibrations of nonlinear systems with two degrees of freedom 217
R. A. Schapery: On the time dependence of viscoelastic variational solutions . . 207
J. E. Smerczynski (*see R. M. McElvery*)
W. Streifer and R. D. Kodis: On the scattering of electromagnetic waves by a dielectric cylinder 193

R. A. Struble: On the oscillations of a pendulum under parametric excitation · · 157
J. M. T. Thompson: Eigenvalue branding configurations and the Rayleigh-Ritz procedure · 244
T. C. T. Ting: The maximum-minimum principles for a quasi-linear parabolic finite difference equation · 47
T. C. T. Ting: A method of solving a system of linear equations whose coefficients form a tridiagonal matrix · 105
R. K. Varma (*see M. P. Murgai*)
M. Wachman: A superposition principle for a system of analytic ordinary differential equations · 143
S. S. Yau (*see S. L. Hakimi*)
Yi-Yuan Yu: On linear equations of anisotropic elastic plates · · · · · · · · · · 357
Chong-Hung Zee: On solving second order nonlinear differential equations · · · 71
BOOK REVIEWS · · · · 34, 46, 56, 78, 79, 80, 132, 160, 192, 216, 267, 318, 326, 334
